

HESPERALOE TENUIFOLIA GRASSY HESPERALOE

Hesperaloe tenuifolia is a densely tufted evergreen plant whose narrow, arching, grasslike leaves can grow close to 3' long. This plant offsets sparingly and is quite drought tolerant. However if water and fertilizer is applied the plant will grow quickly year-round. This plant enjoys full sun, reflective sun and partial shade. Be sure to plant in a soil that can drain thoroughly. White flowers occur primarily in April and May and are visited by bats and hawk moths. Originating just northeast of Alamos, Mexico growing among the Oaks and *Agave bovicornuta*.

AT A GLANCE SUMMARY

SIZE (H X W)	3 feet x 3 feet
FLOWER COLOR	White
FLOWER SEASON	April—May
EXPOSURE	Full or reflected sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	15° F, USDA Zone 8
PRUNING	Remove old flower spikes
