

## AGAVE MURPHEYI MURPHEY'S AGAVE

The Murphy agave is a bold, medium-sized specimen with blue-green to gray-green leaves decorated with striking bud imprints. Typically solitary it will occasionally produce offsets. Native to central Arizona and northern Mexico at elevations from 1500 to 3000 feet, this plant tolerates extreme heat and full sun with minimal supplemental irrigation. The flower stalks produce pale green flowers and many tiny plantlets known as bulbils. The mother plant will die after flowering requiring replacement. Hardy to 10° F, it is placed in USDA Zone 7

### AT A GLANCE SUMMARY

SIZE (H X W)	3 feet x 3 feet
FLOWER COLOR	Green
FLOWER SEASON	Upon maturity
EXPOSURE	Full sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	10° F, USDA Zone 7
PRUNING	None required
