

AGAVE MURPHEI 'RODNEY' VARIEGATED MURPHEY'S AGAVE

This variegated selection of Murphy agave was selected by the late Rodney Engard, a noted Arizona plantsman. The growth habit and size are identical to the regular species shown on the left. Although typically solitary it will occasionally produce offsets. Native to central Arizona and northern Mexico at elevations from 1500 to 3000 feet, this plant tolerates extreme heat and full sun with minimal supplemental irrigation. The mother plant will die after flowering requiring replacement. Hardy to 10° F, USDA Zone 7.

AT A GLANCE SUMMARY

SIZE (H X W)	3 feet x 3 feet
FLOWER COLOR	Green
FLOWER SEASON	Upon Maturity
EXPOSURE	Full Sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	10° F, USDA Zone 7
PRUNING	None required
