

## YUCCA ROSTRATA BEAKED YUCCA

The blue leaves, tall narrow trunk, and spectacular summer display of creamy white flowers combine to make this one of the finest yuccas for ornamental landscapes. *Yucca rostrata* forms a trunk to about 10 feet tall. Young plants are usually unbranched, but older plants may develop multiple heads near the top. The narrow blue leaves are up to 2 feet long by ½ inch wide, and end in a sharp terminal spine. *Yucca rostrata* prefers full sun or very light filtered shade, and a rocky, well-drained soil without supplemental organic matter. Our plants were grown from seed or tissue culture and planted in the field. This yucca is one of the most adaptable and versatile species, handling extreme heat and cold with aplomb.

AT A GLANCE SUMMARY	
SIZE (H X W)	>10 feet x 3 feet
FLOWER COLOR	White
FLOWER SEASON	Late Spring - Summer
EXPOSURE	Full Sun, Very Light Shade
WATER	Low
GROWTH RATE	Slow-Moderate
HARDINESS	-20° F, USDA Zone 5
PRUNING	Remove Spent Flower Stalks
