

Agave titanota 'Snaggle Tooth'

This medium-sized agave is from the Mexican state of Oaxaca where it is found on limestone soils. The rigid, upright 5 inch wide leaves are a medium green with a whitish cast to the surface. 'Snaggle Tooth' is a form with a wide creamy-white variegation on the leaf edges. This agave produces offsets which can be left to form a cluster, or removed to encourage a solitary plant. Offsets are more pronounced in containers versus planted in the ground. Typical size is about 30 inches tall and wide. Plants may be placed in full sun in cooler climates, but performs best in light shade in the low deserts. This agave is hardy to about 25 degrees F.

AT A GLANCE SUMMARY

SIZE (H X W)	2 1/2 feet x 2 1/2 feet
FLOWER COLOR	Yellow
FLOWER SEASON	Dies after flowering
EXPOSURE	Full sun to part shade
WATER	Low
GROWTH RATE	Slow
HARDINESS	25° F, USDA Zone 9b
PRUNING	None
