

ACACIA ANGUSTISSIMA FERN ACACIA

This deciduous shrub creates a low growing dense groundcover which spreads by underground stems. The finely dissected fern-like leaves are 2 to 5 inches long with numerous pairs of tiny leaflets. In areas where frost is common it will freeze to the ground, recovering rapidly in the spring to reach a height of 1 to 3 feet. The ivory puffball flowers are about ½ inch in diameter, appearing from summer to fall. Fern Acacia is quite xeric and needs good drainage. It will grow in full sun or part shade.

AT A GLANCE SUMMARY

SIZE (H X W)	1-3 feet x 1-3 feet
FLOWER COLOR	Ivory
FLOWER SEASON	Summer - Fall
EXPOSURE	Full Sun - Part Shade
WATER	Low
GROWTH RATE	Rapid
HARDINESS	15° F, USDA Zone 8
PRUNING	After Frost
