

Acacia salicina Willow Acacia

This evergreen Australian native has narrow green leaves and a weeping growth habit, making it ideal for use around water features or in oasis zones. It is more tall and narrow than most desert trees, reaching a mature size of 40 ft tall by 20 ft wide. Fragrant, creamy white puffball flowers are heaviest in spring, but may appear anytime during the year. This tree requires deep, infrequent irrigation to develop a strong anchoring root system, and summer pruning to thin the canopy reduces wind resistance. Hardy to 20° F. USDA Zone 9.

AT A GLANCE SUMMARY

SIZE (H X W)	40 feet x 20 feet
FLOWER COLOR	White
FLOWER SEASON	Spring, intermittently all year
EXPOSURE	Full sun, reflected heat
WATER	Low, deep irrigation
GROWTH RATE	Fast
HARDINESS	20° F, USDA Zone 9
PRUNING	Thin as needed
