

Agave havardiana Havard Agave

This moderate-sized agave is native to rocky grasslands in west Texas and northern Mexico, at elevations of 4000 to 6000 feet. This handsome plant has stout silver grey leaves bearing marginal teeth and a sharp terminal spine. The leaves are held in a tight rosette which is typically solitary. Single plants can reach a size of 3 feet tall by 4 feet wide, and occasionally produce offsets. The tall, branched flower stalk has greenish-yellow flowers. It is quite cold hardy, to -20° F, and prefers full sun exposures at higher elevations. In the low deserts some light shade is beneficial. USDA Zone 5.

AT A GLANCE SUMMARY	
SIZE (H X W)	3 feet x 4 feet
FLOWER COLOR	Green
FLOWER SEASON	Flowers at end of life cycle
EXPOSURE	Full sun to part shade
WATER	Low
GROWTH RATE	Moderate
HARDINESS	-20° F; USDA Zone 5
PRUNING	None
