

Agave murpheyi Murphy's Agave

The Murphy's agave is a bold, medium-sized specimen with blue-green to gray-green leaves decorated with striking bud imprints. Plants will produce offsets at the base. Native to central Arizona and northern Mexico at elevations from 1200 to 3000 feet, this plant tolerates extreme heat and full sun with minimal supplemental irrigation. The branched flower stalks produce pale green flowers and many tiny plantlets known as bulbils. The mother plant will die after flowering requiring replacement. Hardy to 10° F, it is placed in USDA Zone 8.

AT A GLANCE SUMMARY	
SIZE (H X W)	3 feet x 3-4 feet
FLOWER COLOR	Green
FLOWER SEASON	Flowers at end of life cycle
EXPOSURE	Full sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	10° F, USDA Zone 8
PRUNING	None required
