

Agave ocahui

Agave ocahui tolerates harsh, reflected heat conditions, while providing a deep green, lush appearance. This native of Sonora, Mexico forms a tight symmetrical rosette of narrow, stiff, dark green leaves with smooth margins and sharp terminal spines. *A. ocahui* is one of the best for tolerating extra moisture in the landscape, but is also quite drought tolerant. The unbranched flower stalk is 10 to 15 feet tall and is densely crowded with yellow flowers. As with most agaves this plant will expire and require replacement once it flowers. Plant in full sun. This species does not typically produce offsets.

AT A GLANCE SUMMARY

SIZE (H X W)	2-3 feet x 2-3 feet
FLOWER COLOR	Yellow
FLOWER SEASON	Flowers at the end of life cycle
EXPOSURE	Full sun, reflected heat
WATER	Very low
GROWTH RATE	Slow to moderate
HARDINESS	15° F, USDA Zone 8
PRUNING	None
