

Agave parryi v. neomexicana New Mexico Agave

One of the smaller selections of *A. parryi*, this variety grows to about 1 1/2' tall x 2' wide, with many offsets. This plant suckers freely to form large clumps of flat-topped rosettes. Its leaves are slender and are blue green to gray in color. It has narrower leaves than the other varieties of *Agave parryi*. This variety is native to southeastern New Mexico and west Texas, growing on rocky limestone slopes from 1400 to 7000 feet in elevation. In low deserts, plant it in part sun and provide good drainage. It can handle full sun exposures at higher elevations. This agave will need some additional moisture in heat of summer. It is very cold hardy, tolerating temperatures down to -20° F. USDA Zone 5.

AT A GLANCE SUMMARY	
SIZE (H X W)	1.5 feet x 2 feet
FLOWER COLOR	Yellow
FLOWER SEASON	Flowers at end of life cycle
EXPOSURE	Full sun to part shade
WATER	Low- to moderate
GROWTH RATE	Slow
HARDINESS	-20° F, USDA Zone 5
PRUNING	None
