

Dalea lutea Sierra Moonrise™

Sierra Moonrise™ is a selection of *Dalea lutea* that grows native in central Mexico and into Guatemala. This Chihuahuan desert native will form a large evergreen shrub, but it will go deciduous in colder climates. Spikes of bright yellow flowers are produced at the branch tips from late summer through the fall. Drought tolerant once established, Sierra Moonrise™ does appreciate regular watering to get started. Grows well in full sun to partial shade in well drained soil.

AT A GLANCE SUMMARY

SIZE (H X W)	6 feet x 6 feet
