Hesperaloe parviflora
Red Yucca

ACCENT

Hesperaloe parviflora produces long-lasting flower spikes throughout the summer and is almost maintenance free. The common red-flowering plants have been a staple in southwestern landscapes for years, but the yellow-flowering selection is a more recent introduction. The two flower colors make a stunning combination! *Hesperaloe parviflora* forms a three to four foot clump of stiff, leathery, grey-green leaves. The tubular flowers attract hummingbirds. This tough plant thrives in full sun, reflected heat, and even tolerates some light shade if drainage is adequate. *Hesperaloe parviflora* also makes a great container plant, and is a clean choice for pool areas. This native of Texas and northern Mexico tolerates temperatures to -20° F. USDA Zone 5.

AT A GLANCE SUMMARY	
SIZE (H X W)	3-4 feet x 4-5 feet
FLOWER COLOR	Coral-Red
FLOWER SEASON	May-September
EXPOSURE	Full sun, part shade
WATER	Low
GROWTH RATE	Slow to moderate
HARDINESS	-20º F, USDA Zone 5
PRUNING	Remove spent spikes
