

Sophora secundiflora Silver Sierra™ Silver Texas Mountain Laurel

Texas Mountain Laurel is a small, thornless, evergreen tree. A good choice for patio areas, it is very clean and grows slowly to 15 feet tall and wide. Silver Sierra™ is a silver-leaved form of the species. It is similar in all respects with the exception that it has bright silver foliage instead of green. This plant has been grafted to ensure consistency. The dark purple wisteria-like blossoms look stunning against the silver foliage. The silver-foliaged plants appear to be less susceptible than the green to the annoying caterpillar moth. The seeds are toxic, but are encased in a nearly impenetrable hard pod, so any danger is minimal.

AT A GLANCE SUMMARY	
SIZE (H X W)	15 feet x 15 feet
FLOWER COLOR	Purple
FLOWER SEASON	Spring
EXPOSURE	Full sun, part shade
WATER	Low, extra summer water
GROWTH RATE	Slow
HARDINESS	10° F, USDA Zone 8
PRUNING	Prune to shape
