

Yucca thompsoniana Thompson's Yucca

The native habitat for this yucca ranges from northern Mexico through west Texas, and into southeastern New Mexico. A small trunk-forming species, it grows slowly to about 6 feet tall by 6 feet wide, developing multiple branches. Short foot-long leaves are blue-green in color, with serrated margins and a sharp terminal spine. Early summer is the bloom season, with 3 to 5-foot-tall flower spikes covered with large white flowers rising above the foliage. Plant in full sun and well-drained soils, and do not overwater. Hardy to -20° F. USDA Zone 5.

AT A GLANCE SUMMARY	
SIZE (H X W)	6 feet x 6 feet
FLOWER COLOR	White
FLOWERING TIME	Early summer
EXPOSURE	Full
WATER	Low
GROWTH RATE	Slow
HARDINESS	-20° F, USDA Zone 5
PRUNING	Remove spent flowers
